FINANCIAL SERVICES

SECURE YOUR DIGITAL PRODUCT DEVELOPMENT
DELIVER A SAFER CUSTOMER EXPERIENCE
MAINTAIN COMPLIANCE WHILE MOVING FAST

**YOUR PARTNER IN SECURING DIGITAL
PRODUCT DELIVERY**

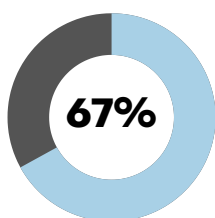

SIMPLY • SCALED • SECURITY™

Financial services firms are among the most frequently targeted by organised cybercrime groups. With high-value transactions and large amounts of customer data it's easy to see why. Your business is founded on **trust** and the safety and security of your customers, institutional and individual, is paramount. As the pace of your digital deliveries increases to remain competitive, you need to ensure security is visibly designed, built in and operated at scale, for your customers, your shareholders and for the regulatory authorities in every country you operate.

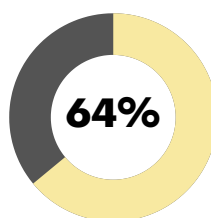

Your challenges

- Ensure all your people have the required knowledge
- Demonstrate compliance in how you're delivering at scale
- Assure security quality at the pace you need to succeed
- Reduce time to detect and time to fix security defects
- Mitigate cyber risk and keep financial systems online

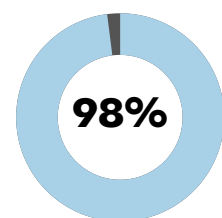

OF FINANCIAL SERVICES FIRMS:

Have 20 or more serious vulnerabilities per application in development

Say that application security processes slow release cycles some of the time

Have experienced at least three successful application exploits in the past year

Data from the Contrast Security 2021 State Of Application Security in Financial Services Report

Simply Scaled Security is our '*people first, product focused*' approach to securing digital product delivery across your organisation, born out of our work with global banks, insurers and fintechs.

CAPABILITIES

Instil effective security knowledge and embed secure ways of working across all of delivery

INSIGHTS

Unlock your data with tooling and analysis, providing insights and observability for informed decision making

3 CONTINUOUS SECURITY

Implement a Trust & Verify operating model to demonstrate continuous secure delivery and compliance at pace and scale

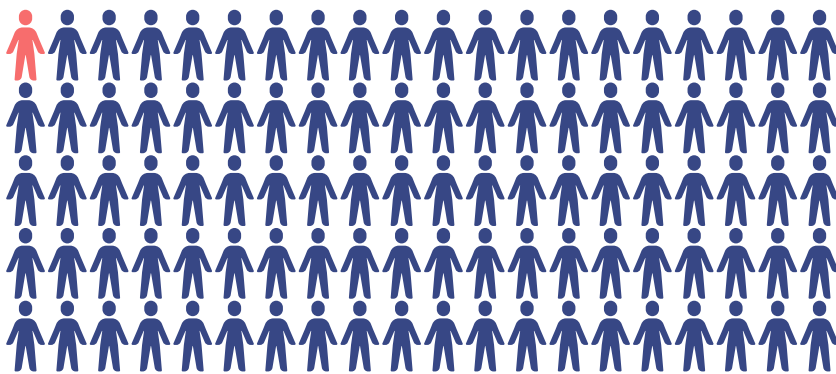

Engaging **SECURE DELIVERY** as your partner in product security gives you a **fully-managed, structured programme of security improvement** across all of delivery building in the insights and observability you need to demonstrate **continuous security and compliance** at scale.

CAPABILITIES

**ORGANISATIONS TYPICALLY HAVE ONLY
ONE SECURITY PROFESSIONAL FOR
EVERY ONE HUNDRED DEVELOPERS**

Data from the Synopsys BSIMM12 2021 Foundations Report

SIMPLY SCALED SECURITY
moves your **CAPABILITIES** to
where you have **CAPACITY**

DELIVER HIGHER QUALITY, MORE SECURE SYSTEMS WITH OUR EXPERT TRAINING AND ANALYSIS

To have confidence in your ability to deliver secure digital systems at pace, it's essential that everyone involved in delivery has the required knowledge, and that their ways of working build in the quality needed.

Our catalogue of expert-led capability workshops cover all of delivery and include group sessions on:

- Leading a Secure Delivery Organisation
- Secure Product Management
- Agile Threat Modelling
- Secure Coding for all Languages
- Incident Response for DevOps Teams
- Security Tooling Implementation

Build capabilities with SECURE DELIVERY

- **Engage all of delivery** across leadership, product management and engineering
- **Expert-led workshops** combine active team learning with experienced consulting
- **Develop common understanding** and a shared language of security across your business
- **No boring videos or online quizzes.** You can't establish new capabilities passively

INSIGHTS

SECURITY ASSESSMENTS DON'T MAKE YOU ANY MORE SECURE

Understanding what they're telling you, the actions you take and **the behaviours that change** because of them is what makes you more secure.

This is why with your Simply Scaled Security programme we include regular structured security assessments **at no extra charge**. With our regular security assessments we:

- **Inform and focus** your programme of security coaching across leadership, product management and engineering
- **Establish visibility** into the current level of security quality built into your delivered products
- **Demonstrate continuous improvement** and programme ROI as you build in new delivery capabilities

OBSERVABILITY EVERYWHERE IS ESSENTIAL TO SECURELY DELIVER DIGITAL SERVICES

Your choice of tooling to support and inform the people and processes in delivery is an essential part of developing world-class security capabilities. We benchmark and assess tooling to provide you with expert guidance and proofs of value.

Some of the most successful vendors of modern security tooling in the world partner with us to provide the services needed to ensure customer success.

Pentests

CONTINUOUS SECURITY

LARGE ORGANISATIONS

STRUGGLE WITH SECURITY & COMPLIANCE

The distributed nature of **modern digital product development**, combined with the size of the organisation, makes the **Command & Control** approach to security and compliance completely ineffective.

From our work with global businesses we see even the largest group-level security teams only getting involved with **4% of the changes** being made to digital systems. Leaving your regulators demanding to know **who's assuring the security of the other 96%**.

WITH YOUR CAPABILITIES WHERE YOU HAVE CAPACITY AND OBSERVABILITY EVERYWHERE YOU CAN MEET THIS CHALLENGE

Security aligns with delivery and works across people, process and technology to achieve a Trust & Verify governance model that scales and is highly-effective.

People

Run expert-led workshops that give teams the skills they need

Develop a common understanding of security across your business

Establish new capabilities to build in security where it's needed most

Process

Scale security across the whole of delivery with a trust & verify model

Adapt easily to a changing business of new products, staff turnover and M&A

Map capabilities to your compliance and regulatory standards

Technology

Evaluate security tools with our comprehensive benchmarks & experience

Integrate sources of data to provide continuous security quality control

Make security visible with delivery dashboards and MI reporting

WHY SECURE DELIVERY?

Traditional cybersecurity consultancies don't understand modern digital product delivery. We are founded by experts in technology delivery, engineering and security and have decades of experience in the most demanding and highly regulated business environments.

We understand what it takes to consistently and provably deliver highly secure digital systems. Our mission is to bring that capability to every organisation that needs to excel in providing secure digital services to their customers.

World leader in digital product security

Trusted partner in security for some of the largest organisations

A proven, scalable approach that covers all of technology delivery

Active engagement and learning not passive box-ticking compliance

Experts in product, engineering and security
